The maXia™ Rugged NVR is designed especially for operation in harsh environments such as those found in industrial settings, mobile applications or in standard applications where the NVR will be located for example in the ceiling, near high/low temperatures, or exposed to other severe conditions. Whether in a moving vehicle or at a fixed location, the Rugged NVR is capable of withstanding unexpected bumps and bruises, takes up very little space when installed under a seat, in a trunk or covertly installed above a drop ceiling and can deliver nonstop IP video recording (up to 30MP).
